About Us

Annadhata Agri Genetics International Limited as a Leading Producer, Manufacturer and Supplier of All Field crops and Vegetable Seeds, Organic Bio Pesticides, Bio- Fungicides, Micro Nutrients and Plant Growth Regulators and Veterinary Products M/s. **Annadhata Agri Genetics International Limited** owns specialized Marketing platform of all Agriculture Products in India and Abroad.

Annadhata Agri Genetics International Limited has a powerful, Professional & Experienced marketing team in specialized fields on above said areas.

We provide Good Quality Seeds, Organic Bio Products with competitive price and perfect service to the farming community. We focus on product quality feedback and timely response from our customer care personal.

OUR RANGE OF PRODUCTS

RINNAH

Crop Duration : 125-130 days
Plant Height(cm) : 100-110
No. of Tillers/Plant : 14-16
Panicle Length(cm): 28-30

- Long Bold, Non scented grains
- High milling recovery
- Very high yielding variety
- Suitable for major Paddy growing areas

JETHRO

Crop Duration : 120-125 days
Plant Height(cm) : 105-115
No. of Tillers/Plant : 15-17
Panicle Length(cm): 28-30

- Long Bold, Non scented grains
- High milling recovery
- Very high yielding variety
- Suitable for major Paddy growing areas

UZZA

Crop Duration : 120-125 days
Plant Height(cm) : 95-105
No. of Tillers/Plant : 14-16
Panicle Length(cm): 28-30

- Super Fine, Non scented grains
- High milling recovery
- High yielding variety
- Suitable for major Paddy growing areas

NIMSHI

Crop Duration : 145-150 days
Plant Height(cm) : 100-110
No. of Tillers/Plant : 14-16
Panicle Length(cm): 28-30

- Super Fine, Non scented grains
- High milling recovery
- High yielding variety
- Suitable for major Paddy growing areas

SHIMMA

Crop Duration : 115-120 days
Plant Height(cm) : 100-110
No. of Tillers/Plant : 14-16
Panicle Length(cm): 28-30

- Long Bold, Non scented grains
- High milling recovery
- Very high yielding variety
- Suitable for major Paddy growing areas

LIBNI

Crop Duration : 125-130 days
Plant Height(cm) : 100-110
No. of Tillers/Plant : 14-16
Panicle Length(cm): 28-30

- Fine Segment, Non scented grains
- High milling recovery
- Very high yielding variety
- Suitable for major Paddy growing areas

ESHWARI - 234

Crop Duration : 110-115 days
Plant Height(cm) : 90-100
No. of Tillers/Plant : 13-15
Panicle Length(cm): 26-28

- Medium slender, Non scented grains
- Early Maturity
- High yielding hybrid

ANNADHATA DAMINI

Crop Duration : 120-125 days
Shape : Straight
Avg. Length (cm) : 35-40
Avg. Wt. (g) : 15-25

- Long tender, shiny green, attractive straight fruits
- Excellent Taste and keeping quality
- Tolerant to DIM and PM diseases

PURVANCHAL KA RAJA

Crop Duration : 130-135 days
Plant Height(cm) : 100-110
No. of Tillers/Plant : 11-14
Panicle Length(cm) : 22-24

- Medium bold, non scented grains
- Excellent cooking quality after ageing
- High Yielding

POORVI-909

Crop Duration : 120-125 days
Plant Height(cm) : 100-110
No. of Tillers/Plant : 11-14
Panicle Length(cm) : 22-24

- Medium bold, scented grains
- Excellent cooking quality after ageing
- High Yielding

MAYURI

Crop Duration : 120-125 days
Plant Height(cm) : 90-100
No. of Tillers/Plant : 14-16
Panicle Length(cm) : 26-28

- Medium slender, Non scented grains
- Early Maturity
- High yielding hybrid

MAYURI GOLD

Crop Duration : 130-135 days
Plant Height(cm) : 90-100
No. of Tillers/Plant : 14-16
Panicle Length(cm) : 26-28

- Medium slender, Non scented grains
- Early Maturity
- High yielding hybrid

1-9

Crop Duration : 110-115 days
Plant Height(cm) : 90-100
No. of Tillers/Plant : 13-15
Panicle Length(cm) : 26-28

- Medium slender, non scented grains
- Early Maturity
- High yielding hybrid

ESHWARI GOLD

Crop Duration : 115-120 days
Plant Height(cm) : 90-100
No. of Tillers/Plant : 13-15
Panicle Length(cm) : 26-28

- Medium slender, non scented grains
- Early Maturity
- High yielding hybrid

ANJALI

Crop Duration : 120-125 days
Plant Height(cm) : 90-100
No. of Tillers/Plant : 13-15
Panicle Length(cm) : 26-28

- Medium slender, non scented grains
- Early Maturity
- High yielding hybrid

ARUNRAJ

Crop Duration : 130-135 days
Plant Height(cm) : 95-100
No. of Tillers/Plant : 12-15
Panicle Length(cm) : 22-25

- Medium Bold, non sticky grains
- Good cooking quality after ageing
- High yielding hybrid
- Tolerant to major Pests & Diseases
- Most suitable taste for Bihar, Jharkhand & West Bengal

AMULYA

Crop Duration : 140-145 days
Plant Height(cm) : 100-110
No. of Tillers/Plant : 14-16
Panicle Length(cm) : 28-30

- Long Bold, Non scented grains
- High milling recovery
- Very high yielding hybrid
- Suitable for major Paddy growing areas

DEEPAJ

Crop Duration : 105-110 days
Plant Height(cm) : 100-105
No. of Tillers/Plant : 12-15
Panicle Length(cm) : 26-28

- Medium bold, non scented grains
- Early Maturity
- High Yielding Hybrid

TANAY

Crop Duration : 130-135 days
Plant Height(cm) : 100-110
No. of Tillers/Plant : 14-16
Panicle Length(cm) : 28-30

- Medium slender, non scented grains
- Medium maturity, non shattering
- High yielding
- Tolerant to major pests & diseases

MALLESHWARI

Crop Duration : 105-110 days (Kharif)
110-115 days (Rabi)
Plant Height(cm) : 105-110
No. of Tillers/Plant : 12-15
No. of grains/panicle : 250-260
Panicle Length(cm) : 27-28

- Early Maturity
- Long medium slender grain
- Aromatic
- Tolerant to major pests & diseases

KRANTIVEER

Crop Duration : 120-125 days
Plant Height(cm) : 95-100
No. of Tillers/Plant : 10-11
Panicle Length(cm) : 21-22

- Medium slender, non scented grains
- Excellent cooking quality, 80%
- rice recovery
- Golden yellow husk colour

DHARBAR

Crop Duration : 120-125 days
Plant Height(cm) : 95-100
No. of Tillers/Plant : 10-11
Panicle Length(cm) : 21-22

- Medium slender, non scented grains
- Excellent cooking quality, 80% rice recovery
- Golden yellow husk colour

AIP-1111

Crop Duration : 125-130 days
Plant Height(cm) : 100-110
No. of Tillers/Plant : 11-14
Panicle Length(cm) : 22-24

- Medium bold, non scented grains
- Excellent cooking quality after ageing
- High Yielding

AIP-2222

Crop Duration : 130-135 days
Plant Height(cm) : 100-110
No. of Tillers/Plant : 11-14
Panicle Length(cm) : 22-24

- Medium bold, non scented grains
- Excellent cooking quality after ageing
- High Yielding

AIP-3333

Crop Duration : 110-115 days
Plant Height(cm) : 100-110
No. of Tillers/Plant : 11-14
Panicle Length(cm) : 22-24

- Medium bold, non scented grains
- Excellent cooking quality after ageing
- High Yielding

AIP-4444

Crop Duration : 120-125 days
Plant Height(cm) : 100-110
No. of Tillers/Plant : 11-14
Panicle Length(cm) : 22-24

- Medium bold, non scented grains
- Excellent cooking quality after ageing
- High Yielding

AIP-5555

Crop Duration : 130-135 days
Plant Height(cm) : 100-110
No. of Tillers/Plant : 11-14
Panicle Length(cm) : 22-24

- Medium bold, non scented grains
- Excellent cooking quality after ageing
- High Yielding

AIP-6666

Crop Duration : 135-140 days
Plant Height(cm) : 100-110
No. of Tillers/Plant : 11-14
Panicle Length(cm) : 22-24

- Medium bold, non scented grains
- Excellent cooking quality after ageing
- High Yielding

AIP-7777

Crop Duration : 140-145 days
Plant Height(cm) : 100-110
No. of Tillers/Plant : 11-14
Panicle Length(cm) : 22-24

- Medium bold, non scented grains
- Excellent cooking quality after ageing
- High Yielding

AIP-8888

Crop Duration : 145-150 days
Plant Height(cm) : 100-110
No. of Tillers/Plant : 11-14
Panicle Length(cm) : 22-24

- Medium bold, non scented grains
- Excellent cooking quality after ageing
- High Yielding

AIP-9999

Crop Duration : 150-155 days
Plant Height(cm) : 100-110
No. of Tillers/Plant : 11-14
Panicle Length(cm) : 22-24

- Medium bold, non scented grains
- Excellent cooking quality after ageing
- High Yielding

SURAB

Crop Duration : 120-125 days
Plant Height(cm) : 100-110
No. of Tillers/Plant : 11-14
Panicle Length(cm) : 22-24

- Medium bold, non scented grains
- Excellent cooking quality after ageing
- High Yielding

RAJENDRA KASTOORI

Crop Duration : 130-135 days (Kharif)
Plant Height(cm) : 100-105
No. of Tillers/Plant : 11-14
No. of grains/panicle : 22-24
Panicle Length(cm)

- Medium maturity
- Short, medium slender grain
- Aromatic
- Tolerant to major pests & Diseases

NARESH

- Crop Duration : 115-125 days (Kharif)
125-135 days (Rabi)
Plant Height(cm) : 270-280 days (Kharif)
270-280 days (Rabi)
Cob Length (cm) : 22-23
Semi dent yellowish orange grains
- Very high yielding under irrigated conditions
 - Yellow anther & Light green silk
 - Stay green fodder

AHM-20A55

- Crop Duration : 115-120 days (Kharif)
120-130 days (Rabi)
Plant Height(cm) : 250-260 days (Kharif)
Cob Length (cm) : 21-22
Semi dent yellowish orange grains
- Very high yielding under irrigated conditions
 - Purple anther & Purple silk
 - Stay green fodder

AVANTHIKA

- Crop Duration : 90-95 days (Kharif)
115-120 days (Rabi)
Plant Height(cm) : 240-260 days (Kharif)
Cob Length (cm) : 18-20
- Semi flint yellowish orange grain
 - Compact grain filling upto tip
 - High yielding hybrid under irrigated conditions

ROSHINI

- Crop Duration : 80-85 days (Kharif)
100-110 days (Rabi)
Plant Height(cm) : 180-200
Cob Length (cm) : 16-18
- Flint orange grains
 - Very high yielding under irrigated conditions
 - Sweet green cobs
 - Stay green fodder

PADMINI

- Crop Duration : 95-100 days (Kharif)
110-115 days (Rabi)
Plant Height(cm) : 220-230
Cob Length (cm) : 17-19
- Semi dent yellowish orange grains
 - Very high yielding under irrigated conditions
 - Red shank, moderate sweet grains
 - Very high yielding hybrid

NANDA

- Crop Duration : 90-95 days (Kharif)
115-120 days (Rabi)
Plant Height(cm) : 240-260
Cob Length (cm) : 17-19
- Semi dent yellowish orange grains
 - Very high yielding under irrigated conditions
 - Very compact grain filling upto tip

AHM-7777

- Crop Duration : 100-105 days (Kharif)
110-115 days (Rabi)
Plant Height(cm) : 250-260 (Kharif)
Cob Length (cm) : 21-22
- Very high yielding under irrigated conditions
 - Purple anther & Purple silk
 - Stay green fodder

AHM-9999

- Crop Duration : 110-115 days (Kharif)
115-120 days (Rabi)
Plant Height(cm) : 250-260
Cob Length (cm) : 21-22
- Very high yielding under irrigated conditions
 - Purple anther & Purple silk
 - Stay green fodder

AHM-88A88

- Crop Duration : 115-120 days (Kharif)
120-130 days (Rabi)
Plant Height(cm) : 250-260 (Kharif)
Cob Length (cm) : 21-22
- Very high yielding under irrigated conditions
 - Purple anther & Purple silk
 - Stay green fodder

PANKAJ

- Crop Duration : 105-110 days
Plant Height(cm) : 145-155
Earhead size & shape: Semi compact, elliptical, fully exerted
Grain: White shiny bold grains
- High yielding, excellent fodder quality
 - Excellent rot quality
 - Tolerant to shoot fly, charcoal rot disease
 - Tolerant to drought & lodging

AHJ-777

- Crop Duration : 100-105 days
Plant Height(cm) : 140-150
Earhead size & shape: Semi compact, elliptical, fully exerted
Grain: White shiny bold grains
- High yielding, excellent fodder quality
 - Excellent rot quality
 - Tolerant to shoot fly, charcoal rot disease
 - Tolerant to drought & lodging

AHJ-888

- Crop Duration : 110-115 days
Plant Height(cm) : 150-160
Earhead size & shape: Semi compact, elliptical, fully exerted
Grain: White shiny bold grains
- High yielding, excellent fodder quality
 - Excellent rot quality
 - Tolerant to shoot fly, charcoal rot disease
 - Tolerant to drought & lodging

TOPPER-181

Crop Duration : 105-110 days
Plant Height(cm) : 180-182
Earhead size & shape:
Semi compact, elliptical, fully
exserted
Grain: White shiny bold grains

- High yielding, excellent fodder quality
- Excellent roti quality
- Tolerant to shoot fly, charcoal rat disease
- Tolerant to drought & lodging

LEAD

Crop Duration : 78-85 days (Kharif)
Plant Height(cm) : 170-190 (Kharif)
No. of tillers/plant : 5-6

- Highly tolerant to downy mildew disease
- Non bristled, semi compact cylindrical earhead with tapering tip
- Medium bold gray colour lustrous grain
- Fully exserted panicle
- Recommended for kharif & late rabi (Jaquary sowing) seasons.

CHANDAN

Crop Duration : 70-77 days (Kharif)
Plant Height(cm) : 170-180 (Kharif)
No. of tillers/plant : 4-5

- Highly tolerant to downy mildew disease
- Non bristled, semi compact long lanceolate earhead
- Grey ovate grains, medium bold
- Recommended for kharif & late rabi (Jaquary sowing) seasons.

THEJASWINI

Crop Duration : 85-90 days
Plant Height(cm) : 160-180
Heart shape : Flat
Seed colour : Black
Oil content (%) : 42-44

- Mid late maturity
- Excellent central filling
- High oil content, tolerant to diseases
- High yielding hybrid

SUBHASHINI

Crop Duration : 85-90 days
Plant Height(cm) : 160-180
Heart shape : Flat
Seed colour : Black
Oil content (%) : 42-44

- Mid late maturity
- Excellent central filling
- High oil content, tolerant to diseases
- High yielding hybrid

INDIRA

Crop Duration : 95-100 days
Plant Height(cm) : 160-170
Heart shape : Convex
Seed colour : Black
Oil content (%) : 40-42

- Late maturity
- Excellent central filling
- High oil content, tolerant to diseases
- High yielding hybrid

TRISHUL

Crop Duration : 120-125 days
Plant Height(cm) : 150-160
Grain Colour & size : Blackish, Medium bold
Oil content : 40-42%
Optimum sowing time : 1st Sep to 20th Oct.

- Good branching, More pods
- Suitable for: Mustard growing areas of Uttar Pradesh, Haryana, Rajasthan, Uttaranchal, Bihar, Jharkhand, WBengal etc.

SHANVI

Crop Duration : 95-100 days
Plant Height(cm) : 150-180
Length of main branch : 100-150 cm
No. of Pods/ main branch : 80-100
Colour & size : Big, Black & Lustrous
Oil content : 40-42%
No. of grains/Pod : 18-20

- Compact fruits with seeds sticking closely to the skin of pod, non lodging
- Branches arise from base of stem
- Suitable for Haryana, Rajasthan & Western UP

SONALI

Crop Duration : 100-105 days
Grain Colour & size : Yellow, Medium bold
Oil content : 42-43%
Plant Height(cm) : 95-105
Optimum sowing time : 1st Sep to 30th Oct.

Suitable area: Mustard growing areas of Uttar Pradesh, Haryana, Rajasthan, Uttaranchal, Bihar, Jharkhand, Nepal etc.

- Good branching, More pods
- High yielder with high oil percentage.

SANIA

Crop Duration : 90-100 days
Plant Height(cm) : 90-95 cm
Grains : Medium bold

- Early maturity, high yielder
- Bright yellow seeds
- Unaffected by severe cold condition because of earliness
- Suitable for UP, Bihar, MP/WB etc

GAME CHANGER

Growth habit : Medium tall, Erect
Plant Height (cm) : 110-120
Crop Duration : 160-165 days
Boll size & shape : Medium round
A x B (mm) : 5.0-5.5
Staple length (mm) : 29-30
Ginning % : 34-36

- Tolerant to sucking pests, and bollworm
- Recommended for both irrigated & rainfed conditions
- Excellent rejuvenation under irrigated conditions
- Medium long staple
- Recommended two toppings at 80 to 85 days & 100 to 100 days after sowing
- Spacing (%)

	Irrigated	Rainfed
Heavy soil	4x4	4x3
Medium soil	4x3	3x3
Light soil	3x3	3x2

COOPER

Growth habit : Open type, tall, Erect
Plant Height (cm) : 150-180
Crop Duration : 150-160 days
Boll size & shape : Big, Oblong with pointed beak
A x B (mm) : 5.0-5.5
Staple length (mm) : 29-30
Ginning % : 30-35

- Tolerant to sucking pests, and bollworm
- Recommended for both irrigated & rainfed conditions
- Excellent rejuvenation under irrigated conditions
- Medium long staple
- Spacing (%)

	Irrigated	Rainfed
Heavy soil	4x4	4x3
Medium soil	4x3	3x3
Light soil	3x3	3x2

ABHISHEK

Crop Duration : 100-110 days
Plant Height(cm) : 90-95
Grain Colour & size : Dull amber,
Medium bold
Suitable area : UP, J&K, H.P, Punjab,
Haryana, Rajasthan,
Uttarakhand, Bihar,
Nepal etc

- Resistance for lodging, very high yielding and free from major diseases

BADSHAH

Crop Duration : 95-105 days
Plant Height(cm) : 95-100
Spike Colour : Reddish
Grain : amber, bold
Suitable area : UP, Rajasthan,
Bihar, Jharkhand,
W.Bengal etc

BHAANU

Crop Duration : 95-100 days
Plant Height(cm) : 40-45
No. of seed/pod : 2-3
Suitable area : Yellowish
Oil content : 17-18%

- Mid late maturity
- Tan pubescent pods; non shattering
- Tolerant to major diseases and pests
- High yielding

CHETHAN

Crop Duration : 140-150 days
Plant Height(cm) : 200-210
Grain colour : Yellowish
No. of seed/pod : 4-5

- Mid late maturity
- Highly tolerant to wilt disease
- Tolerant to pod borer
- Sweet green pods to high TSS
- Excellent dai quality
- Good reflush under irrigated conditions
- Very high yielding

RAHUL

Crop Duration : 120-125 days
1st Harvest : 45-50 days
Type : Dark green,
tender fruits
Length (cm) : 10-12

- Dark green tender fruits
- Excellent fruit quality
- Highly tolerant to YVMV disease
- High yielding hybrid

RAKESH

Crop Duration : 115-120 days
1st Harvest : 45-50 days
Type : Dark green,
tender fruits
Length (cm) : 10-12

- Dark green tender fruits
- Excellent fruit quality
- Highly tolerant to YVMV disease
- High yielding hybrid

GAGAN

Crop Duration : 115-120 days
1st Harvest : 40-45 days
Type : Dark green, tender
and thin fruits
Length (cm) : 12-14

- Excellent fruit quality
- Highly tolerant to YVMV disease
- Vigorous plants with more branching
- High yielding hybrid

BUNNY

Growth habit : Determinate
Shape : Flat round
Avg. wt.(g) : 65-70
Firmness : Very firm

- Flat round shape
- Deep red colour at maturity
- Excellent sour taste
- Highly tolerant to early and late blight
- Highly tolerant to TYLCV
- Whitish green without green shoulder

HARSHA

Growth habit : Semi Determinate
Shape : Flat round
Avg. wt.(g) : 80-85
Firmness : Very firm

- Flat round shape
- Green with green shoulder
- Deep red colour at maturity
- Excellent sour taste
- Highly tolerant to early and late blight
- Highly tolerant to TYLCV

THEJA

Growth habit : Determinate
Shape : Oval round
Avg. wt.(g) : 85-90
Firmness : Very firm

- Unripe is whitish green
- Deep red colour at maturity
- Firm fruits with thick skin
- Highly tolerant to early and late blight
- Highly tolerant to TYLCV

INDRAJITH

Plant type : Bushy
Plant height (cm) : 110-120
Unripe colour : Dark green
Length (cm) : 9-11

- Highly pungent fruits
- Suitable for red chilli
- Highly tolerant to leaf curl diseases.

GIRISH

Plant type : Semi spreading
Plant height (cm) : 100-110
Unripe colour : Shiny dark green
Length (cm) : 10-11

- Very early maturity
- Firmfruits with more shelf life
- Very good colour retention.

SAAKETH

Plant type : Tall, Spreading, vigorous
Plant height (cm) : 100-120
Length (cm) : 9-11

- Attractive light green unripe fruits
- Suitable for green chilies
- Very productive and high yielding
- Fruits with wrinkled skin and high pungency
- Very good keeping quality

SAARANG

Plant type : Medium tall, Spreading
Plant height (cm) : 100-110
Colour : Green with white stripes at blossom end
Length (cm) : 7-8

- Light green leaves with lobing
- Green calyx without spines
- High yielding
- Tolerant to major pests and diseases.

UDAY

Plant type : Tall, Spreading
Plant height (cm) : 150-160
Colour : Green with purple stripes
Length (cm) : 8-10

- Attractive green fruits with purple stripes
- Leaves light green with acute lobing and spiny
- Calyx green and spiny
- High yielding

VARDHAN

Plant type : Medium tall, Spreading
Plant height (cm) : 100-125
Colour : Dark Purple
Length (cm) : 70-80

- Round to oval in shape
- Non spiny
- First harvest 60 to 65 days from date of planting
- High yielding hybrid

AISHWARYA

Crop Duration : 110-120 days
Colour : Dark Green
Avg. Length (cm) : 25-30
Avg. Wt.(g) : 100-120

- Medium long, Dark green, sharp prickled fruits
- Excellent keeping quality
- Very high yielding

SAROJ

Crop Duration : 110-120 days
Colour : Dark Green with sharp pickles
Avg. Length (cm) : 25-30
Avg. Wt.(g) : 100-120

- Medium long, Dark green, sharp prickled.
- Excellent keeping quality
- Early picking
- Very high yielding

PIYUSH

Crop Duration : 100-110 days
Shape : Straight
Avg. Length (cm) : 40-45
Avg. Wt.(g) : 250-300

- Long tender, shiny green, attractive straight
- Excellent Taste and keeping quality
- Tolerant to DM and PM diseases
- Very high yielding hybrid

PATEL

Crop Duration : 115-120 days
Colour : Straight
Avg. Length (cm) : 35-40
Avg. Wt.(g) : 225-275

- Long tender, Shiny Green, Attractive straight
- Excellent Taste and keeping quality
- Tolerant to DM and PM diseases
- Very high yielding hybrid

NEELU

Avg. Length (cm) : 35-40
Avg. Wt.(g) : 800
Colour : Light Green

- Girth top 23 cms, Middle 25 cms, Bottom 23.5 cm
- First harvest 60 to 65 days from date of sowing
- High yielding hybrid
- Suitable for all seasons

ANUSKA

Avg. Length (cm) : 20-25
Avg. Wt.(g) : 125-150
Colour : Light Green
Shape : Long, Cylindrical

- Girth top 8.5 cms, Middle 12 cms, Bottom 9 cm
- First harvest 50 to 55 days
- High yielding early hybrid

RUKMINI

Day to 1st Harvest : 35-40 days after sowing
Length : 25-30 cm
Colour : Dark green
Shape : Attractive Dark Colour

- High yielding hybrid

SWETHA

Day to 1st Harvest : 75-80 days after sowing
Length : 3-4 Feet
Colour : Smooth light Green stripes
Shape : Attractive Dark Colour

- Research variety with high yielding
- Good tolerance to downey mildew

VAISHNAVI

Fruit Shape : Round
Rind colour : Pale green with netted
Fruit size : 1-1.25 Kgs

- High yielding hybrid
- Flesh after maturity is deep orange in colour
- Good flavor and taste, More sweet
- Good keeping quality

KARISHMA

Crop Duration : 90-100 days
Fruit Shape : Oval
Fruit Colour : Green with Dark Green stripes
Avg. Fruit Wt.(g) : 9-10 Kg

- Attractive dark green fruits with black stripes
- Crimson red pulp with granular texture and more sweeter
- Highly tolerant to bud necrosis & fusarium wilt
- Excellent keeping quality

CHANDAN

Crop Duration : 70-75 days
Fruit Shape : Oval
Fruit Colour : Green with Dark Green stripes
Avg. Fruit Wt.(g) : 8-12 Kg

- Attractive dark green fruits with black stripes
- Crimson red pulp with granular texture and more sweeter
- Highly tolerant to bud necrosis & fusarium wilt
- Excellent keeping quality

NALANDA

Crop Duration : 75-80 days
Fruit Shape : Round
Fruit Colour : Dark Green
Avg. Fruit Wt. : 3.5-4 Kgs

- Thick rind, good for long distance transportation
- Flesh red in colour, crispy
- Very sweet in taste and high yielding

RADHA

Crop Duration : 60-60 days
Fruit Shape : Oblong in Shape
Fruit Colour : Dark Green, Smooth shiny
Avg. Fruit Wt.(g) : 1.5 to 2 Kgs

- Thick rind, Red crispy flesh with less number of seeds
- Very sweet and good keeping quality

KIRANMAI

Avg. Length : 20-22 cm long
Shape : Cylindrical
Colour : Light green with mottled skin
1st harvest after sowing : 40-45 days

- Crisp, Uniform, straight fruits
- Good keeping quality

KARTHIKA

Avg. Length : Medium vine
Shape : Cylindrical
Colour : Dark Green
Size : 12-15 cms long
Girth : 5-7 cms girth
1st harvest after sowing : 70-75 days

- High yielding non bitter fruits

GANESH

First harvest : 8-9 months from date of transplanting
Average Fruit Size : 1.5 - 2 Kgs
Colour : Flesh is orange

- Medium height and vigorous growing with high yield and gynodioecious hybrid
- Female fruits are round, gynaecoid fruits are oblong in shape
- Good fruit setting, uniform size, very good keeping quality
- Good flavor and taste

LAKSHMI

Crop Duration : 60-65 days (First Picking)
Colour : Dark green, after ripening bright red in colour
Shape : Blocky, Thick, Smooth, Shiny
Plant height : 1.5-2.5 feet
Avg. Fruit Wt.(g) : 125-130

- Strong plant and bushy in habit
- Very low pungency
- High yielding with uniform fruit size

MUNNI

Crop duration : 65-70 days
Shape : Round compact
Leaves : Waxy bluish thick leaves
Avg. Wt. : 1 Kg

- Very good field retention capacity
- Medium large plant spread
- Round compact heads
- Moderately tolerant to major diseases

DINAZ

- First cutting 30 days from date of sowing
- Multi cut variety, every 15 days cutting can be done
- It will give 5 to 7 cuttings
- Broad leaves with good flavor
- Attractive color and flavor
- fletcher's good market price

PRANAY

Crop duration : 110-115 days
1st Harvest : 45-50 days
Type : Dark green, tender fruits
Length (cm) : 10-12

- Dark green tender
- Excellent quality
- Highly tolerant to YVMV disease
- High yielding hybrid

ROHITH

Plant type : Medium tall, Spreading
Plant height (cm) : 90-100
Colour : Green with white stripes at blossom end
Length (cm) : 7-8

- Light green leaves with lobing
- Green calyx without spines
- High yielding
- Tolerant to major pests and diseases.

ROSHAN

Plant type : Medium tall, Spreading
Plant height (cm) : 105-115
Colour : Green with white stripes at blossom end
Length (cm) : 7-8

- Light green leaves with lobing
- Green calyx without spines
- High yielding
- Tolerant to major pests and diseases.

HASINA

Crop Duration : 110-120 days
Colour : Dark green
Avg. Length (cm) : 25-30
Avg. Wt.(g) : 100-120

- Medium long, dark green, sharp prickled
- Excellent keeping quality
- Very high yielding

VIRAT

Crop Duration : 115-125 days
Colour : Dark green
Avg. Length (cm) : 25-30
Avg. Wt.(g) : 100-120

- Medium long, dark green, sharp prickled
- Excellent keeping quality
- Very high yielding

THEJA

Crop Duration : 105-115 days
Shape : Straight
Avg. Length (cm) : 40-45
Avg. Wt.(g) : 250-300

- Long tender, shiny green, attractive straight
- Excellent Taste and keeping quality
- Tolerant to DM and PM diseases
- Very high yielding hybrid

CHANDAN

Crop Duration : 90-100 days
Shape : Straight
Avg. Length (cm) : 40-45
Avg. Wt.(g) : 250-300

- Long tender, shiny green, attractive straight
- Excellent Taste and keeping quality
- Tolerant to DM and PM diseases

LAMBUJI

Crop Duration : 80-90 days
Shape : Straight
Avg. Length (cm) : 35-40
Avg. Wt.(g) : 15-25

- Long tender, shiny green, attractive straight
- Excellent Taste and keeping quality
- Tolerant to DM and PM diseases

DAMINI

Crop Duration : 120-125 days
Shape : Straight
Avg. Length (cm) : 35-40
Avg. Wt.(g) : 15-25

- Long tender, shiny green, attractive straight
- Excellent Taste and keeping quality
- Tolerant to DM and PM diseases

YAMINI

Crop Duration : 90-95 days
Shape : Straight
Avg. Length (cm) : 35-40
Avg. Wt.(g) : 15-25

- Long tender, shiny green, attractive straight
- Excellent Taste and keeping quality
- Tolerant to DM and PM diseases
- Very high yielding hybrid

MEENA

Crop Duration : 100-105 days
Shape : Straight
Avg. Length (cm) : 30-40
Avg. Wt.(g) : 15-25

- Long tender, shiny green, attractive straight
- Excellent Taste and keeping quality
- Tolerant to DM and PM diseases
- Very high yielding hybrid

GAURAV

Crop Duration : 80-90 days
Shape : Straight
Avg. Length (cm) : 35-40
Avg. Wt.(g) : 15-25

- Long tender, shiny green, attractive straight
- Excellent Taste and keeping quality
- Tolerant to DM and PM diseases
- Very high yielding hybrid

JAYANTHI

Crop Duration : 70-75 days
Shape : Straight
Avg. Length (cm) : 35-40
Avg. Wt.(g) : 15-25

- Long tender, shiny green, attractive straight
- Excellent Taste and keeping quality
- Tolerant to DM and PM diseases
- Very high yielding hybrid

CROP BOOSTER

Crop Booster is a bio-organic nutritional product derived from vegetable source. Induces flowering and reduces flower drops. **Crop Booster** improves fruit size quality. **Crop Booster** stimulates protein synthesis as it contains amino acids, Humic Acids and Seaweed which are building blocks induces flowering and fruit set related hormones. **Crop Booster** improves the efficiency of the pesticides and fungicides with synergism.

Dosage: 2mL per liter of water.

CHALLENGER +

Challenger + helps managing BPH in paddy crop. It helps and promotes plant growth.

Challenger + is zero toxic to plants, animals and human beings. Since it is organic product.

Dosage:
Dissolve 50g per acre.

SUPER FIGHTER

Super Fighter formulation is primarily based on herbal extracts. It modified natural oils. It makes the insects to become weak and reduce their appetite due to its anti feed property. It effectively controls spodoptera and Heliothis.

Crops: Cotton, Chilli, Paddy, Grapes, Vegetables, Horticultural.

Dosage: Mix 0.7mL per one liter of water.

COMMANDER

Commander is a bio-organic nutritional product derived from vegetable source. Induces flowering and reduces flower drops. **Commander** improves fruit size quality. **Commander** stimulates protein synthesis as it contains amino acids, Humic Acids and Seaweed which are building blocks induces flowering and fruit set related hormones. **Commander** improves the efficiency of the pesticides and fungicides with synergism.

Dosage: 2mL per liter of water.

TOPPER

Topper is a mixture of seaweed granules and various amino acids. It used for Growth, Tillering, Yield of the plant. It helps in better crop spread, induces flowering and fruit set.

Topper enhance the photo synthesis and metabolic activity of the plant.

Crops: Paddy, Cotton, Chillies, Pulses, Oil seeds, and plantation crops.

Dosage: 10Kg per 1 Acre.

SUPER FIRE

Super Fire is a plant protector. It protects crops from Larval pests like Spodoptera, Helicoverpa, Thrips and Mites on Cotton, Chilly, Groundnut, Tea, Jasmine and all Horticulture Crops etc.,

Crops: Cotton, Chillies, Grapes, Coffee, Tea, Vegetables, Mango, Pomegranate.

Dosage: 1 mL per liter of water.

CHALLENGE - GR

Challenge-GR is a mixture of seaweed granules and various amino acids. It used for Growth, Tillering, Yield of the plant. It helps in better crop spread, induces flowering and fruit set.

Challenge-GR enhance the photo synthesis and metabolic activity of the plant.

Crops: Paddy, Maize, Cotton, Chillies, Pulses, Oil seeds, and plantation crops.

Dosage: 4Kg per 1 Acre.

MASTER

Master is a natural product. It is a broad spectrum systemic fungicide and diseases that are born due to fungal attacks like Whitelly, Greenly, powdery mildew, Downy mildew.

Crops: Chillies, Vegetables, Citrus, Paddy, Water, Melon, Mango, Pomegranate, Pulse (black gram, Groundnut) etc.,

Dosage: Mix 2.5mL per litre of water.

CROP GREENER

Crops Greener organic plant growth enhance gives better crop output and its quality through enhanced genetic potential expression.

Crops Greener helps in optimizing the rate of metabolic pathways in plant body and improves synthesis of various molecules, resulting in higher yields.

Dosage: 450/500gms per acre for better results mix with Urea and apply in Field without Urea also Farmer can use it.

CROP YIELDER

Crop Yielder is a mixture of seaweed granules and various amino acids. It used for Growth, Tillering, Yield of the plant. It helps in better crop spread, induces flowering and fruit set.

Crop Yielder enhance the photo synthesis and metabolic activity of the plant.

Crops: Paddy, Cotton, Chillies, Pulses, Oil seeds, and plantation crops.

Dosage: 5Kg per 1 Acre.

ANSWER

Answer is an organic product derived from herbal and medical plants along with bio elements as it is an organic bio product which covers plants from many disease in various crops.

Answer increases immunization in plants to fight against diseases.

Answer is eco friendly, long term effect, easy to resolve and no residue. It promotes higher yields.

BACHELOR

Bachelor is a bio-organic nutritional product derived from vegetable source. Induces flowering and reduces flower drops. **Bachelor** improves fruit size quality. **Bachelor** stimulates protein synthesis as it contains amino acids which are building blocks induces flowering and fruit set related hormones. **Bachelor** improves the efficiency of the pesticides and fungicides with synergism.

Dosage: 0.7mL per liter of water.

GABBAR

Gabbar is an organic product derived from herbal and medical plants along with bio elements as it is an organic bio product which covers plants from many disease in various crops.

Gabbar increases immunization in plants to fight against diseases. This product is eco friendly, long term effect, easy to resolve and no residue. It promotes higher yields.

HI-SPEEDER

Hi-Speeder is a plant protector. It protects crops from Larval pests like Spodoptera, Helicoverpa on Cotton, Chilly, Groundnut, Tea, Jasmine and all Horticulture Crops etc.,

Crops: Paddy, Cotton, Chillies, Grapes, Coffee, Tea, Tomato, Redgram, Greengram and all Vegetables.

Dosage: 2.5 ml. per liter of water

JOKER

Joker is a bio-organic nutritional product derived from vegetable source. Induces flowering and reduces flower drops. **Joker** improves fruit size quality. **Joker** stimulates protein synthesis as it contains amino acids, Humic Acids and Seaweed which are building blocks induces flowering and fruit set related hormones. **Joker** improves the efficiency of the pesticides and fungicides with synergism.

Dosage: 2ml. per liter of water.

MAYURI

Mayuri is a plant inducer derived from herbal and medical plants along with bio elements as it is an organic bio product which covers plants from many disease in various crops.

Mayuri increases immunization in plants to fight against diseases. This product is eco friendly, long term effect, easy to resolve and no residue. It promotes higher yields.

OFFICER

Officer is a plant inducer derived from herbal and medical plants along with bio elements as it is an organic bio product which covers plants from many disease in various crops.

Officer increases immunization in plants to fight against diseases. This product is eco friendly, long term effect, easy to resolve and no residue. It promotes higher yields.

RACER

Racer is a combination product. **Racer** is formulated with oil based emulsifiers. Its application disrupts respiration, cell membrane structure, disrupt feeding in sucking and chewing pests like aphids, jassids, Thrips, Helicoverpa, Spodoptera etc., **Racer** can be used for preventive and curative purpose. **Racer** is made protein hydrolysates (amino acids), seaweed extracts, vitamins and naturally extracted enzymes and other essential compounds for plant growth. It promotes vegetative and reproductive growth.

SUPER CHALLENGER

Super Challenger is a plant inducer derived from herbal and medical plants along with bio elements as it is an organic bio product which covers plants from many disease in various crops.

Super Challenger increases immunization in plants to fight against diseases. This product is eco friendly, long term effect, easy to resolve and no residue. It promotes higher yields.

SUPER POWER

Super Power is a combination product. **Super Power** is formulated with oil based emulsifiers. Its application disrupts respiration, cell membrane structure, disrupt feeding in sucking and chewing pests like aphids, jassids, Thrips, Helicoverpa, Spodoptera etc., **Super Power** can be used for preventive and curative purpose. **Super Power** is made protein hydrolysates (amino acids), seaweed extracts, vitamins and naturally extracted enzymes and other essential compounds for plant growth. It promotes vegetative and reproductive growth.

CROP STAR

Crop Star is a bio-organic nutritional product derived from vegetable source. Induces flowering and reduces flower drops. **Crop Star** improves fruit size quality. **Crop Star** stimulates protein synthesis as it contains amino acids which are building blocks induces flowering and fruit set related hormones. **Crop Star** improves the efficiency of the pesticides and fungicides with synergism.

Dosage: 2ml. per liter of water.
